

Driving Safer Choices:

Used Car Safety Awareness

Empowering Australians to make informed, safe, and confident used car purchases

**“Every safe
journey
begins
with an
informed
choice.”**

**At NRSP, we help drivers make safer, more
informed choices when buying used cars.**

WHO WE ARE:

The National Road Safety Partnership Program (NRSPP) provides practical tools, evidence, and partnerships to improve road safety across Australian industries and communities.

Founded in collaboration with Monash University Accident Research Centre (MUARC), NRSPP is dedicated to reducing road trauma by promoting shared learning, leadership, and cultural change.

Since 2014, NRSPP has partnered with over 400 organisations — from logistics to local government — to create safer systems and support informed decision-making at every level.

Why Used Car Safety Matters:

The Reality

Over 60% of cars purchased in Australia each year are used vehicles.

The average age of vehicles on Australian roads is 10.6 years, compared with just 4.4 years in Japan.

A 2023 MUARC study found that older vehicles are involved in 36% of fatal crashes, despite making up only 20% of the fleet.

The Risk

Many second-hand buyers, especially young drivers, make purchasing decisions based on price or appearance. This lack of awareness can have deadly consequences.

Every year, over 1,100 Australians die and 40,000 are seriously injured on our roads. Choosing a safer vehicle could prevent hundreds of those tragedies.

Our Vision and Mission:

Vision:

At NRSP, we envision a future where every Australian — regardless of budget, background, or experience — has access to a safe vehicle and the knowledge to make informed purchasing decisions. We believe that the safety of a car should never depend on its price tag. Whether new or used, every vehicle on the road should protect its driver, passengers, and everyone around it.

Used car safety is more than a consumer issue; it's a public safety priority. In Australia, over 60% of all car sales are second-hand vehicles, many of which are 8 to 12 years old. These older vehicles are disproportionately represented in fatal crashes. Data from the Monash University Accident Research Centre (MUARC) shows that drivers of vehicles manufactured before 2010 are twice as likely to die or be seriously injured compared to those in newer models equipped with modern safety technology.

Our vision is to close that safety gap — through education, awareness, and the power of informed choice.

Mission:

The Used Car Safety Awareness Campaign is part of NRSP's broader commitment to reducing workplace and community road trauma. Our mission is to turn awareness into action by making safety knowledge accessible, relatable, and easy to apply.

Our mission recognises that safety doesn't begin on the road — it begins in the buying process. Every informed choice made at a used car lot or online listing is a step toward preventing future crashes.

By focusing on communication design, data translation, and real-world accessibility, NRSP transforms technical safety information into everyday understanding. The goal is to ensure that every buyer, from first-time young drivers to family car owners, feels confident that their decision is not only practical but life-saving.

We aim to:

- Educate drivers on the real-world impact of vehicle safety ratings and crash avoidance features.
- Empower buyers with simple visual tools and resources that guide safer purchasing decisions.
- Collaborate with dealerships, insurers, and local councils to create a shared culture of safety.
- Encourage inspection, maintenance, and data transparency within the used car industry.

Our Approach

Evidence-based

NRSPP campaigns are grounded in data from national crash reports, insurance studies, and MUARC's Used Car Safety Ratings (UCSR).

Design-led

Through simple, visual communication, we make technical safety data understandable for everyday Australians.

Human-focused

We connect with drivers emotionally — helping them feel empowered, not overwhelmed, by safety choices.

Every element of this campaign is informed by research. Our foundation comes from over three decades of crash data compiled by the Monash University Accident Research Centre (MUARC) and the Vehicle Safety Research Group (VSRG).

Complex safety information often fails to reach the public because it's overly technical. Our approach translates that data into simple, visual, and relatable communication — icons, infographics, posters, and digital interfaces that make car safety intuitive. The design system uses bold color cues (orange, black, white) and clear typography (Franklin Gothic family) to create visual consistency across print and digital platforms.

By applying the principles of communication design, we ensure that life-saving knowledge is not only accessible — but also memorable. Road safety is ultimately about people, not policies.

We focus on real human experiences — from first-time car buyers to families upgrading their vehicle. Through workshops, mobile outreach vans, and an educational app concept, our campaign meets people where they are: in communities, dealerships, and online.

What We Offer

Educational Materials

— posters, guides, and infographics explaining key safety features.

NRSP's Used Car Safety Campaign transforms evidence and education into practical, everyday tools. We don't just talk about safety — we design systems that make safety a habit.

Our resources are built for accessibility, scalability, and impact across multiple sectors, from community education to workplace fleets.

Community Engagement

— roadshow events, inspection days, and safety workshops.

Our campaign materials translate complex crash data into easy-to-read, engaging resources. These materials are adaptable for local councils, schools, and workplaces — making road safety part of everyday conversation.

Digital Tools

— a concept app helping users identify high-safety models and inspection services.

Awareness grows through interaction. In 2024, pilot workshops across Victoria reached over 1,800 participants, with 93% reporting increased confidence in identifying safe vehicles.

Industry Partnerships

— collaboration with car dealerships, insurers, and government transport agencies.

Change happens faster when we work together. By creating a consistent safety message across the used car industry, NRSP builds a shared standard of responsibility.

Website

The STOP. CHECK. DRIVE. website serves as the campaign's central digital platform — a space where education, interaction, and awareness come together. Designed with clarity and accessibility in mind, the website translates complex vehicle safety knowledge into an engaging, user-friendly experience that empowers drivers to make informed decisions when buying used cars.

The homepage introduces the campaign's core message with the tagline "Think before you drive. Check smarter. Drive safer."

Its clean layout and bold typography reflect NRSP's commitment to transparency and trust. Each visual element — from the orange-black-white palette to the geometric icon system — reinforces the campaign's design language of safety, structure, and motion.

The site is organised into three intuitive sections that mirror the campaign's key steps:

- STOP — raising awareness of potential risks and encouraging reflection before purchase.
- CHECK — offering practical tools, inspection guides, and checklists.
- DRIVE — promoting confidence through verified safety information and ongoing learning.

Interactive features such as safety rating comparisons, downloadable resources, and an expert Q&A section transform passive information into active engagement. Responsive design ensures seamless use across desktop and mobile, extending accessibility to a wider audience.

Measuring Impact and Learning Forward

From Data to Difference

Every NRSPP campaign is built on continuous learning. We measure impact not only through statistics, but through culture change — how people talk about, value, and act on safety.

Learning Forward

These numbers reflect more than statistics — they represent a shift in values. NRSPP continues to adapt, integrating new data and feedback to refine our educational materials and outreach methods. By combining rigorous evaluation with creative communication, we ensure that every campaign grows stronger, smarter, and more impactful.

Our performance indicators include:

- Engagement: Tracking participation in community events, workshops, and digital platforms.
- Behavioural Change: Measuring the percentage of buyers who check safety ratings before purchasing.
- Partnership Growth: Monitoring the expansion of collaborating organisations nationwide.
- Outcome Metrics: Comparing crash and injury rates in target communities pre- and post-campaign.

Early results from our pilot projects show promising outcomes:

- 85% of participants reported feeling more confident about identifying safe vehicles.
- 67% said they would prioritise safety features over price in their next purchase.
- Participating dealerships reported a 40% increase in customer inquiries about safety ratings
